This report contains data through the week ending 04/25/2015 (MMWR week 16).

Overview of Influenza Surveillance: Surveillance for the 2014-2015 influenza season officially began on September 28, 2014. The Utah Department of Health publishes a weekly report throughout the active influenza season that synthesizes data from a variety of sources to give the most complete and up-to-date picture of influenza activity in the state of Utah. Data in this report should be considered provisional, and may change as more complete reports are received.

Influenza-like Illness (ILI): The U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) is a national system that conducts surveillance for influenza-like illness (ILI) in outpatient healthcare facilities. ILINet providers report weekly the total number of patients seen for any reason and the number of patients seen with ILI (defined as a fever ≥ 100° F and a cough or sore throat). These data are used to determine the amount of ILI circulating in the community, as well as provide insight into regional differences in ILI activity. More than 50 facilities within 10 health jurisdictions throughout Utah participate in ILINet.

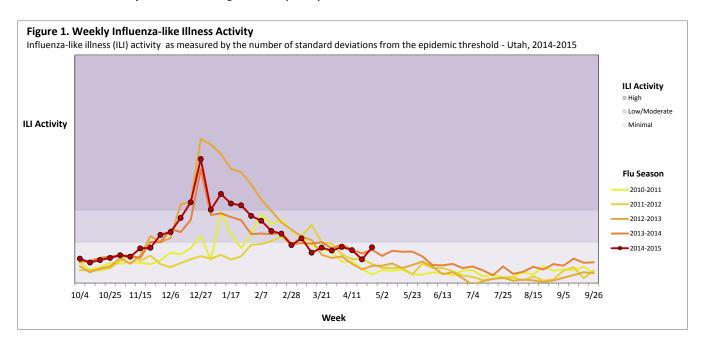

Table 1. Influenza-like Illness (ILI) Activity Levels by Health District - Utah, Current Week

District Starr, Sarrent Treek		
Health District	ILI Activity	
Bear River	Minimal	
Central Utah	Minimal	
Davis County	Minimal	
Salt Lake County	Minimal	
Southeast Utah	No Data *	
Southwest Utah	Low/Moderate	
Summit County	Minimal	
Tooele County	Minimal	
TriCounty	No Data *	
Utah County	Low/Moderate	
Wasatch County	Minimal	
Weber-Morgan	Minimal	
State Average	Minimal	

<sup>\*</sup>No participating sites in this jurisdiction

This report contains data through the week ending 04/25/2015 (MMWR week 16).

Influenza Hospitalizations: Influenza hospitalizations are a reportable condition in Utah. A person meets the case definition for an influenza hospitalization if they are hospitalized for any length of time and have an influenza positive serology, DFA, PCR, culture or rapid influenza diagnostic test. Public health in Utah gathers a variety of data on influenza hospitalizations including clinical features, course of illness, risk and protective factors, and influenza type and subtype. Data from influenza hospitalizations allows public health in Utah to better understand subgroups of the Utah population that are most severely affected by influenza and help to guide prevention messages and interventions.

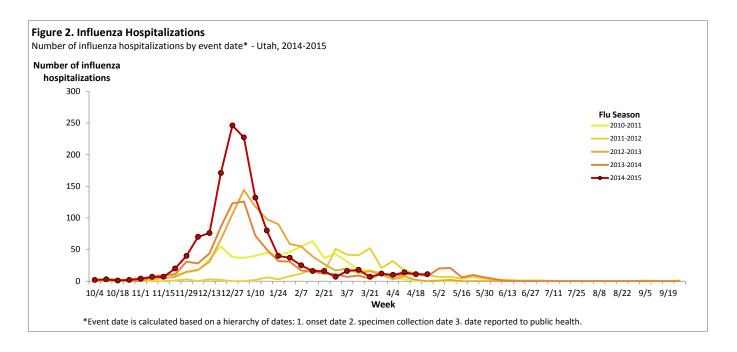

Table 2. Influenza Hospitalizations by Health District - Utah

Health District	Current Week	Season To Date
Bear River	3	57
Central Utah	0	24
Davis County	2	132
Salt Lake County	4	681
Southeast Utah	0	2
Southwest Utah	1	96
Summit County	0	26
Tooele County	0	9
TriCounty	0	19
Utah County	0	155
Wasatch County	0	7
Weber-Morgan	1	120
State Total	11	1328

This report contains data through the week ending 04/25/2015 (MMWR week 16).

Table 3. Influenza Hospitalizations by Age Group - Utah, Season To Date

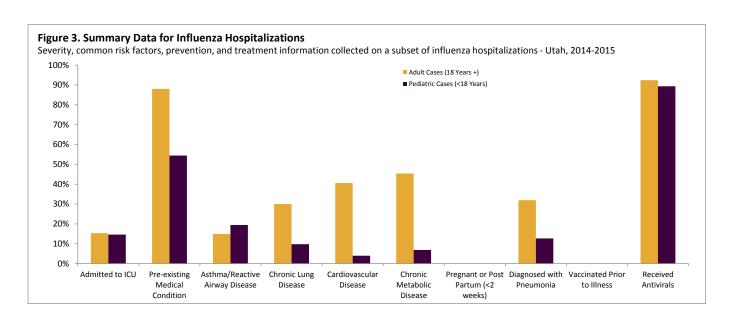

Age Group	Total Cases	% of Cases	Rate*
0-4	121	9.1	45.5
5-24	112	8.4	11.7
25-49	156	11.7	16.3
50-64	198	14.9	47.8
65+	741	55.8	282.1
Total	1328	100.0	46.5

<sup>\*</sup>Rate is calculated as the number of cases per 100,000 population

Table 4. Influenza Hospitalizations by Sex and Race - Utah, Season To Date

Variab	le	Num. of Cases	% of Cases	% in Utah Pop p value*
Sex	Male	649	48.9	50.2 0.3161
	Female	674	50.8	49.8 0.4687
	Unknown	5	0.4	NA
Race	White, Not Hispanic	959	72.2	79.9 0.5018
	Hispanic	124	9.3	11.9 < 0.0001
	Native Hawaiian/Pacific Islander	32	2.4	1.0 < 0.0001
	Black/African American	18	1.4	1.3 < 0.0001
	American Indian	12	0.9	1.5 < 0.0001
	Asian	18	1.4	2.2 < 0.0001
	Unknown	165	12.4	NA

<sup>\*</sup>If a p value is ≤ 0.05, there is a significant difference between the percentage seen in influenza hospitalizations and the general Utah population.

This report contains data through the week ending 04/25/2015 (MMWR week 16).

Student Absenteeism: School-age children are at high risk for respiratory virus infections, including influenza. Aggregate, all-cause absenteeism data is collected weekly from over 350 schools throughout Utah. These data are analyzed to identify elevated absenteeism rates that could indicate the circulation of influenza in school-age children.

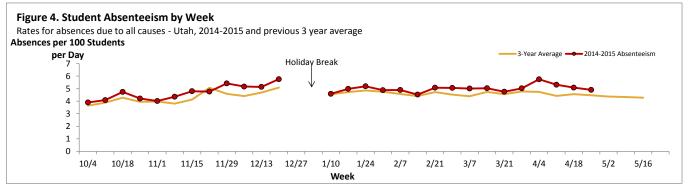

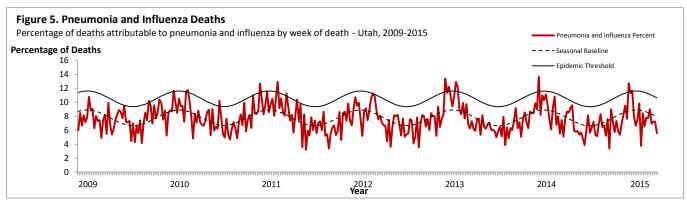

Table 6. Weekly Student Absenteeism - Utah, Current Week

Health District	Absences per 100		
	students/day		
Bear River	3.8		
Central Utah	2.9		
Davis County	4.0		
Salt Lake County	4.0		
Southeast Utah	6.8		
Southwest Utah	5.7		
Summit County	5.9		
Tooele County	5.5		
TriCounty	7.3		
Utah County	2.6		
Wasatch County	4.5		
Weber-Morgan	6.7		
State Average	4.9		

Pneumonia and Influenza Deaths: Each week the total number of death certificates received and the number of those for which pneumonia or influenza was listed as an underlying or contributing cause of death is collected. The percentage of deaths due to pneumonia and influenza are compared with a seasonal baseline and epidemic threshold value calculated for each week. These data are used to monitor the severity of influenza illness in the community.

Laboratory Surveillance: The Utah Public Health Laboratory recieves specimens from all over the state for comprehensive influenza testing. All specimens are tested to determine influenza type and subtype. A portion of specimens are also sent to the Centers for Disease Control and Prevention for additional testing, including gene sequencing, antiviral resistance testing and antigenic characterization.

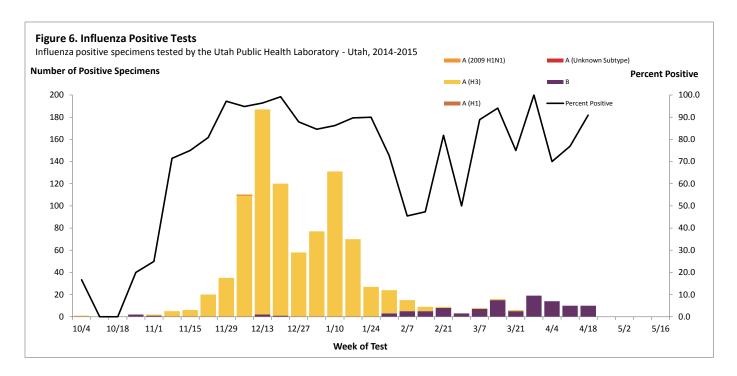

Table 8. Utah Public Health Laboratory Influenza Testing Data

	Current	Current Week		Season	To Date	
	Total	Percent	_	Total	Percent	
Specimens tested	11			1,138		
Positive specimens	10	90.9		996	87.5	
	Positive Specimens by Type/Subtype					
Influenza A	0	0.0		885	88.9	
A (2009 H1N1)	0	0.0		1	0.1	
A (H1)	0	0.0		0	0.0	
A (H3)	0	0.0		884	99.9	
A (unable to subtype)	0	0.0		0	0.0	
Influenza B	10	100.0		111	11.1
